I think there is still an issue with the traffic lights at Aztec west, the council have changed the light sequence around Xmas time.

Previously coming from Bristol on the Gloucester road towards the M5 from the EE building to the M5 roundabout the traffic used to flow quite well now the traffic is gridlock. From my perspective they have changed the lights on the northbound exit and entry slip roads. Previously, when the lights changed to go into the roundabout under the M5, the lights on the other side of the roundabout and the northbound entry slip lights would turn green as well, allowing a lot of traffic to flow onto the M5.

However now when you enter the roundabout under the M5 the exit slip lights turn green which only allows a few cars through at a time, am not sure why they have changed the sequencing as there never appeared to be any queuing traffic at the M5 exit slip road previously?
